

CRITICAL DATA. POWERFUL NETWORKS.™

IP-485™ Evaluation Kits and OEM Modules

IP-485™ products deliver advanced IP Enabled (TCP/IP) Ethernet functionality on existing serial twisted pair RS-485 networks for vast applications.

The EC-3482 Grid MicroCircuits™ module multiplexes medium bandwidth Ethernet data simultaneously with the existing RS-485 serial data operations.

With PCN IP-485™ technology, users can now expand and update existing legacy serial data buses using twisted pair networks, and transport Ethernet communication on the same twisted pair of wire.

Applications include commercial, industrial, defense, aerospace and energy installations among other where added TCP/IP functionality is needed or required.

IP-485™ simply adds the desirable IP enabled functionality while minimizing the associated costs of new wire, connectors, switches and other TCP/IP infrastructure needs that is often cost or labor prohibitive.
